

- 4 A small ball is dropped from rest from height h_1 above the ground and falls vertically downwards. The ball collides with the ground and bounces back vertically upwards, reaching a maximum height h_2 . Fig. 4.1 shows the ball just before and just after hitting the ground.

Fig. 4.1

The ball has mass 0.25 kg and is in contact with the ground for a time of 0.18 s . Just before the ball hits the ground, it has speed 5.2 m s^{-1} . Just after it leaves the ground, it has speed 3.6 m s^{-1} . Air resistance acting on the ball is negligible.

- (a)** State and explain whether the collision is elastic or inelastic.

[1]

- (b) (i)** Calculate the change in momentum of the ball during the collision with the ground.

[2]

- (ii)** Determine the average force on the ball during the collision with the ground.

[2]

- (c)** Calculate the ratio $\frac{h_2}{h_1}$.
